TS-108 Court-Coat II

Serve A Winner!

Court-Coat II is the right way to create a sports court or renew your existing indoor or outdoor activity area. This durable product has been specifically formulated to out perform typical acrylic court coatings. We've reinforced the 100% acrylic base with mono-epoxy resins for added durability producing the kind of durable, non-glare, sport court finish you expect.

Unlike typical court coatings Sport-Court II is available in 100 colors! It adheres to a wide variety of surfaces including wood, asphalt, masonry and concrete. It has good impact resistance, abrasion resistance, color retention, hardness and resists wearing, fading and chalking. It is acceptable for use on indoor and outdoor, recreational tennis, basketball, handball, squash, and soccer courts. It withstands adverse environmental weather conditions while successfully meeting the surface demands of a variety of sports activities over a period of years.

Court-Coat II is single stage eliminating the need for mixing multiple components together. It has been designed as a self priming system in two or three coats. To control ball speed and traction add aggregate Court-Coat #1, #2 or # 3 aggregate additive to the second coat then apply a third coat to seal it in. Practical coverage is 250-300 square feet per gallon depending on porosity. Thins with water. Available in one gallon or five gallon containers.

Product Features:

- Self priming on most surfaces.
- Eliminates the need for mixing multiple components.
- Produces a hard scuff resistant surface.
- Acceptable for interior and exterior applications.
- Superior color retention.
- Resists cracking and peeling.
- Allows for low temperature applications down to 40F.
- Lead free formula.
- Court-Coat aggregates control court speed.
