TS-905 Aquapoxy Polyamine Epoxy

TS-860

Environmentally Responsible Zero VOC Nontoxic Epoxy Floor Coating System

Aquapoxy is a new generation epoxy floor coating product featuring specially formulated components that produce excellent build, hardness, chemical resistance, durability color and gloss retention not commonly produced by water based floor coating products. It is a water based catalyst-cured polyamine epoxy floor coating that utilizes the latest on modern coatings technology producing outstanding results quickly and easily.

The no-odor zero VOC formula is easy to use and produces impressive long lasting results quickly and economically. It self levels to a ultra smooth glossy finish. It can be used with or without aggregates, or use it with Super-Fleck chips to create a unique decorative non-skid floor remarkably fast.

While Aquapoxy is acceptable for use on concrete floors in commercial kitchens, retail spaces, garage floors and basements it should be at the top of your list for manufacturing, commercial and industrial areas where a highly durable chemical resistant finish is required. It holds up to high volume motorized traffic, corrosive chemicals, spilled fuel, oil and grease. It is acceptable for interior and exterior use. It will not lift to hot tires and withstands high impacts and abrasions.

Practical coverage is 200-250 square feet per gallon. Thins and washes up easily with water. Acceptable for motorized traffic in just 48 hours. Available one gallon or four gallon kits. Sheen is glossy.

Product Features:

- Zero VOC, no odor eco-friendly product.
- Provides a high level of chemical resistance.
- Self leveling high gloss finish.
- Impact and scuff resistant finish.
- Dry enough for foot traffic in 12 hours, motorized traffic in 48 hours.
- Spray, roll or squeegee application.
